Academics as Gender Advocates

- * Many advocates for gender in aquaculture and fisheries are faculty and researchers of various academic institutions
- * Proliferation of gender research in a range of resource use, governance, rights-based and other topics in the fisheries sector

How are gender concerns mainstreamed in Fisheries education?

- * In the curricula
- * In the conduct of research
- * In doing extension work

What we need to ask:

- * What are the gains in mainstreaming gender in fisheries education thus far?
- * What challenges remain?
- * How do we move forward?

Experiences from:

- * India
- * Thailand
- * Japan
- * Philippines

Some more questions for group discussion:

- * Do we have sex-disaggregated data related to Fisheries courses?
- * How many of our colleagues share our gender advocacy?
- * Do we have institutional support for mainstreaming gender in fisheries education?
